Phasor Practice Problems

Equation List:

$$\tilde{V} = V_{real} + jV_{imaginary} = V \cos \phi + jV \sin \phi = V e^{j\phi} = V \angle \phi$$

$$V = \sqrt{(V_{real})^2 + (V_{imaginary})^2}$$

$$\phi = \tan^{-1}(V_{imaginary}/V_{real})$$

$$\tilde{A} + \tilde{B} = (A_R + A_I j) + (B_R + B_I j) = (A_R + B_R) + (A_I + B_I) j$$

$$\tilde{A} \times \tilde{B} = A B e^{j(\phi_A + \phi_B)} = AB \angle (\phi_A + \phi_B)$$

$$\tilde{A}/\tilde{B} = \frac{A e^{j\phi_A}}{B e^{j\phi_B}} = \frac{A}{B} e^{j(\phi_A - \phi_B)} = A/B \angle (\phi_A - \phi_B)$$

1. Express the following in polar form (length and angle).

(a) $\tilde{A} = 2+2j$

(b) $\tilde{B} = -3+4j$

2. If $\tilde{C} = 2+3j$ and $\tilde{D} = 1+2j$, find

(a) $\tilde{C} \times \tilde{D}$

(b) \tilde{C}/\tilde{D}

Answers:

1. (a) $\tilde{A} = \sqrt{8} \angle \frac{\pi}{4}^\circ = \sqrt{8} e^{j\frac{\pi}{4}}$

2. (a) $\tilde{C} \times \tilde{D} = 8.06 \angle 120^\circ = 8.06 e^{j\frac{3\pi}{2}}$

(b) $\tilde{B} = 5 \angle 127^\circ = 5 e^{j0.71\pi}$

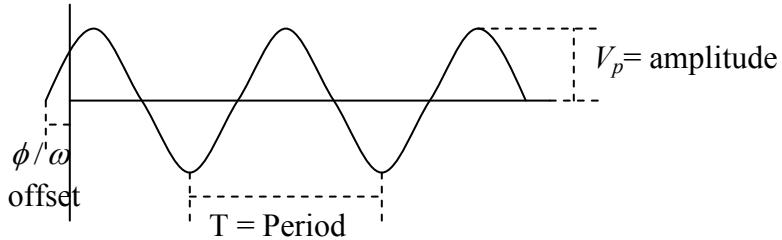

(b) $\tilde{C}/\tilde{D} = 1.61 \angle -7.12^\circ = 1.61 e^{-j0.04\pi}$
