PHYSICS 102 IMAGE IDENTIFICATION

Purpose: To practice interpreting images from other planets.

For each of the following images answer these questions:

- For each letter marked on the image, what is the surface feature indicated?
- How can you tell what features these are?
- What geologic surface processes formed them?
- What planet do you think this might be and why?
- In what order (oldest to youngest) were the features formed (if more than one) and why?
